	Urgent	Not Urgent
Important	**Do - (Your MVP)** ● Read the API key from an environment variable and send authenticated requests ● Look up two players by name and season, with a clear error if a name isn't found ● Print key stats side by side, such as points, rebounds, assists, and shooting percentages ● Calculate a weighted overall score for one season and show who scores higher	**Schedule - (For V2.0+)** ● Career-wide overall score across all seasons ● Percentile rankings against the rest of the league ● Playoff stats and advanced metrics like PER ● Saving API responses to a local file to stay within rate limits
Not Important	**Delegate - (Use a library)** ● Requests for sending HTTP calls to the API ● The built-in json module for reading API responses ● The built-in os module for reading the API key	**Delete - (Cut it)** ● A graphical interface or website with charts ● User accounts and saved favorite players ● Team comparisons or game outcome predictions ● Predicting future seasons with machine learning ● Live in-game stats ● A mobile app
